

CHECKLIST OF BIRDS IN AND AROUND POONA

Friends of Animals Publication

A Request to Birdwatchers

Milvus migrans gevinda usually known as Pariah kite, has now been renamed as 'Brown kite' by our society.

Pariah ~ (Pariyar in tamil) means outcast, low caste, of a low grade etc.

We don't want this caste system in bird watching and certainly not when our nation is trying its level best to irradiate this caste system

So from today, let's call it. "Brown Kite"
(चार - मराठी).

(Ref. No. 37 in Checklist).

Checklist of Birds in & Around Poona

Price Rs. Two only.

Preface

Bird Watching is a very interesting hobby, and the number of bird watchers is increasing by the day. We are really glad about it, and are trying our level best to create interest amongst young and old alike.

We regularly arrange 'Nature Camps'. Upto now we have successfully carried out camps at Pune, Varandh, Shrivardhan, Lonavala, Sinhagad, and Manali (Himachal Pradesh).

At present we are working on a plan to convert and develop Pashan lake (13 Kms away from Pune) into a well managed Water Bird Reserve.

This checklist of birds in and around Pune has been prepared after studying the birds for about two years. We have tried not to include subspecies, as their identification is quite difficult. It may also be noted that some flycatchers, warblers, leaf warblers may not be included due to this reason.

Our main bird watching has been restricted to some areas in Pune, a key to which is given below, to make the comprehension of this list easier. The Geographical area taken into consideration around Pune is 16 Kms. and due to this reason, we have not included some species like Spoonbills, Painted Storks, Great Indian Bustard, etc. even though they have been spotted mere twenty Kms. away from Pune.

The Key for the Areas :

M—Mula Mutha river, and Bird sanctuary, Yeroda.

P —Pashan lake.

K —Katraj ghats and lake.

N —N.D.A. and around it.

S —Sinhagad.

U —University.

H —Hadapsar.

E —Empress Garden.

This does not mean that birds are not seen in other areas of Pune.

The following abbreviations have been used to point out the status of the bird.

R — Resident.	S — Stray
M — Migrant	C — Common
LM — Local Migrant	U — Uncommon
BM — Breeding Migrant	O — Occasional
? — Status Unknown.	

It has been noted that there are quite a number of birds which are not expected to find in geographical area of Pune, but are seen sometimes. We have put them under S i.e. Stray. The most prominent of these strays are Sarus Crane, Flamingoes, Black Ibis, Ruddy Kingfisher etc.

Authentic reports of new observations are most welcome giving details of place, time, date, no. of birds, and possibly a photograph, and any other additional information, so that we can have a more upto date checklist in the next edition.

Acknowledgements :

The books and references used are :
